vMonitor - eBusiness infrastructure management software for intranet

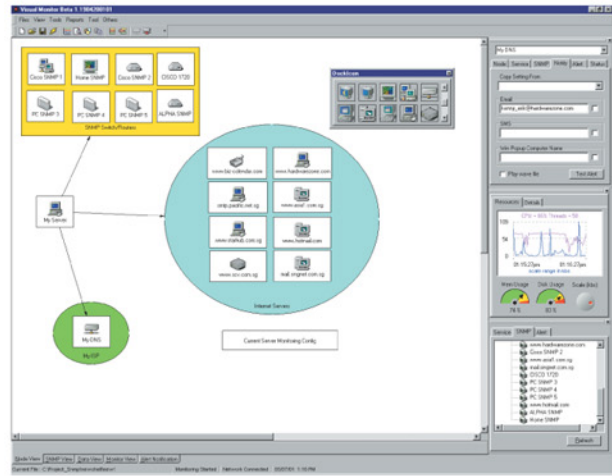

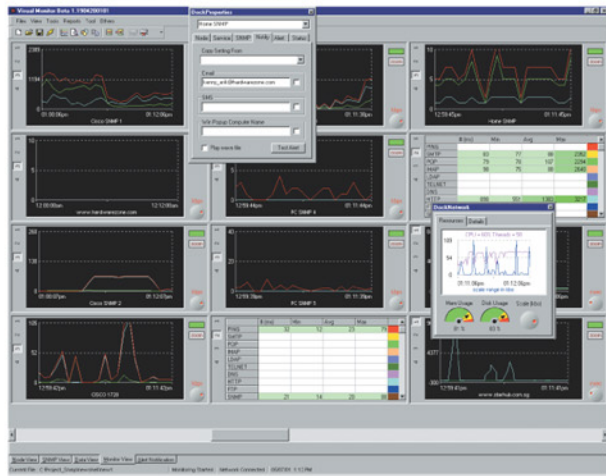

vMonitor

vMonitor simplifies the management of your complicated eBusiness intranet infrastructure.

In the eBusiness world everything counts in seconds. vMonitor provides real time performance information of your critical eBusiness components (like router, switch, server, website, email, database) you know exactly how the systems perform, and minimize disruption to your business.

vMonitor is an easy to use and integrated solution to manage eBusiness infrastructure - from SMEs to enterprise. Simply replace existing network management software with vMonitor for additional eBusiness server/application monitoring.

vMonitor Features

Visual Graph - real time performance of all the monitored components in one screen

Auto Discovery - find out all equipment and servers in your network automatically

Notification - immediately notify any performance degradation or service interruption through email, sms or windows message

Reports - standard performance reports plus captured raw data for customized reports

Standard Based - monitor all network equipment, servers and applications with TCP/IP or SNMP support

Easy to use - design for SMEs with minimum technical support resource

Frequency - check the equipment and servers from every 15 seconds
